Tymetal Corp. designs and manufactures the most extensive line of perimeter security gates and accessories for the Commercial/Industrial and the Correctional markets. Security applications in these two markets range from maximum/medium to medium/low security. Regardless of the security application, Tymetal can provide a gate to fit your needs. We specialize in the unusual and we welcome the challenge. When it comes to closing openings, Tymetal is the best, by far.

Engineered solutions to closing openings – that's Tymetal. Being one of the first companies to manufacture engineered aluminum cantilever slide gates, Tymetal, a wholly owned subsidiary of The Fort Miller Group, Inc., has received several patents on its evolving technology. Most of these patents center on our ability to "harden," or further fortify, our gates for enhanced terrorist deterrence.

With installations in fifty states and evolving international penetration, Tymetal is the company to call for your security gate needs. From cantilever slide, ornamental picket, and vertical lift gates to crash systems and a full range of gate operators, Tymetal has the solution. Our reputation, earned over many years of superior performance, has distinguished Tymetal in all markets where security is a concern.

Whether it is for industrial, port, aviation, military, prison, utility, or governmental purposes, Tymetal has the engineered solution for closing openings.
