Safety Rail Source Introduces New “Green” OSHA Compliant Roof Edge Railing System

The environment is important to you and to us at the Safety Rail Source and Kee Safety. We are constantly innovating and moving towards providing environmentally friendly products. Our new KeeGuard® roof edge railing protection system is now “green”. The cast steel counterbalance weights for KeeGuard have been replaced with 100% recycled PVC. These new counterbalances are environmentally friendly and are molded with E-Z carrying handles and a non-slip surface.

Our new KeeGuard PVC is OSHA compliant, E-Z and fast to install. KeeGuard is engineered to be free-standing and does not penetrate the roofing membrane. The standard counterbalance color is gray with optional colors available.

The Safety Rail Source makes it easy to order your KeeGuard roof edge railing system. All you need to do is provide us a roof plan with dimensions and we'll do the engineering and provide an estimate including shop drawings. If you need an expert site visit, installation instruction, or a final inspection visit, we're there for you.

The Safety Rail Source has been manufacturing and distributing safety railing systems and skylight fall protection since 1999. For more information on our new KeeGuard PVC, please call us at 877-723-3766 or visit our web site at www.safetyrailsource.com.
