- New Technology
- Thin Design
- Durable Strength

Hormel Institute • Austin, MN

A New Era In Staircase Design

Staircases can now boast attractive, sleek treads that offer several design options to the customer. The standard 4 inch thick self-supporting tread has been redesigned to these sleek, thinner dimensions.

- Four-foot long tread at 1.5 inches thick
- Six-foot long tread at 1.75 inches thick
- Eight-foot long tread at 2 inches thick

Labor savings are significant, as most any contractor or installer can set the treads.

- Save money with the elimination of different stair substrates.
- The new treads not only look great, they can color-match with several flooring options to complement any decor.
