

READY-ARCH™

A RADIUS TRACK® PRODUCT

Hand-bendable Ready-Arch is the fast and dependable way to create an accurate arch shape while you're on the job site. Sold in straight sections, Ready-Arch holds its shape once formed and does not require screws, so it installs rapidly and greatly reduces labor costs.

Without any tools you can quickly create round, elliptical or S-shapes. Use convenient and economical Ready-Arch to create any curved shape for attaching steel or wood studs. Ready-Arch makes it easy to form elliptical and eyebrow curves for windows, inside and outside faces of soffits, light coves, or any articulated, stepped or offset surface. Ready-Arch can also do creative S-bends.

Ready-Arch is an ideal alternative to cutting, snipping, or other shaping methods with wood or steel. It also eliminates the need to wait for delivery on specifically sized arch products. Since Ready-Arch is stocked at your local distributor, there is no lead time, and you can easily adapt to changing variables. Just pick the width you need and, on the job site, quickly form the radius required.

Contact your local distributor for Ready-Arch pricing and availability.

APPLICATIONS

Soffits, arches, light coves, and elliptical and eyebrow curves for windows and doorways. Ready-Arch profiles are available for all standard residential and commercial framing sizes. See installation instructions for details on how to use Ready-Arch for specific applications.
